EDUCATION

Northeastern University

Boston, MA

Master of Science in Computer Science, Minor in Digital Media

09/2024 – 04/2026

Coursework: Building Scalable Distributed Systems, Cloud Computing, Object-Oriented Design, Software Development

National Taiwan University

Taipei, Taiwan

Bachelors of Science, Double Major in Computer Science and Chemical Engineering

09/2016 – 05/2022

Coursework: Advanced Web Development, Data Processing and Analysis, Data Structures and Algorithms

EXPERIENCE

Software Engineer Intern

05/2025 – 11/2025

Bytedance (TikTok) — Go, Python, SQL, Redis, Docker, RAG, Multi-Agent Systems

San Jose, CA

- Built **AI-powered on-call diagnostic bot** in **Go** serving **200+ internal users**, reducing average resolution time **50%** (7→3.5 days) by auto-aggregating ads data, and relevant past incidents at ticket creation
- Enabled **knowledge-base-driven self-service** powered by **RAG** and **LLM-based** routing that automates **50%** of 30+ weekly ad-platform issues, eliminating dependency on on-call engineers for common incidents
- Developed **6+ integrated troubleshooting tools** in **Go** — permission verification, access checks, log-based user lookup, and one-click bug filing — behind a unified **card interface** accessible to non-technical staff
- Designed **multi-agent diagnostic workflows** from internal runbooks for ad delivery debugging, reducing manual escalations previously involving **10+ people** per incident
- Built **knowledge pipeline** converting resolved incidents into searchable articles via **LLM** chat summarization and **RAG**, with **Redis** caching on high-frequency lookups to minimize query latency

Software Engineer Intern

11/2024 – 01/2025

ReMo — Python, Go, FastAPI, YOLOv11, Docker, React, Zustand, AWS ECS

Portland, ME

- Developed backend services using **Golang** and **FastAPI**, enabling sub-3s inference latency for multi-stage OCR and metadata extraction
- Built a 90% accurate book spine recognition pipeline with **YOLOv11**, **Internvl**, and custom **LLM-based** metadata extraction
- Optimized frontend bundle size and rendering performance by implementing lazy-loading and code-splitting in **React**, reducing initial page load time by **25%**
- Containerized and deployed services via **Docker**, **AWS ECS**, and **API Gateway** for high availability

Software Engineer Intern

07/2023 – 08/2023

Yanray Inc. — C#, .NET Core, Azure, Redis, Cosmos DB, Robot Framework

Taipei, Taiwan

- Delivered **95%** structured field extraction accuracy by building a business card recognition pipeline with **Azure AI Vision** and a custom **LLM**
- Boosted metadata retrieval speed by **31%** (175ms → 120ms) by caching reference lookups in **Redis** and optimizing **Cosmos DB** queries
- Applied SDLC best practices to develop, test, and deploy the backend on **Azure App Service**, integrating telemetry with **Application Insights**

Research & Development Intern

07/2022 – 08/2022

Acer | Python, OpenVINO, YOLOv7, FaceNet, Model Quantization, PyTorch, ONNX

Taipei, Taiwan

- Built a real-time meeting assistant that performed face and QR recognition under **300ms latency** by combining model training, **OpenVINO** quantization, and async inference
- Trained and fine-tuned **YOLOv7** and **FaceNet** models for QR detection and face recognition, optimizing for both accuracy and deployment efficiency
- Reduced model latency by **50%** through **INT8 quantization** and model conversion for CPU deployment

TECHNICAL SKILLS

Languages: Java, Python, C++, JavaScript, C#, Typescript, Ruby, Golang, Swift, Scala

Frameworks & Tools: Spring Boot, .Net, Dropwizard, Node.js, React, Maven, JUnit, Tomcat, Bazel

DevOps: AWS, GCP, Azure, Kubernetes, Message Queue, OpenFeign, Eureka, Docker, Microservices, RabbitMQ

Databases: MySQL, PostgreSQL, Redis, MongoDB, NoSQL, Iceberg, Mybatis, Hibernate, Spark, Hadoop

OS: macOS, Windows, Linux **Machine Learning:** Pytorch, XGBoost, scikit-learn, TensorFlow
