EDUCATION

Northeastern University

Master of Science in Computer Science

- Coursework: Cloud Computing, Distributed Systems, Object-Oriented Design

Boston, MA

09/2024 – 04/2026

National Taiwan University

B.S., Double Major in Computer Science and Chemical Engineering

Taipei, Taiwan

09/2016 – 05/2022

IT & INFRASTRUCTURE EXPERIENCE

Network and System Administration, NTU CSIE 2311/1310

Spring 2022

- Configured **pfSense** firewall, **LDAP** directory service, **DNS**, **NFS** shares, and Apache web hosting on bare-metal Linux as graded lab assignments
- Set up Cisco managed switches, partitioned storage, built virtualized environments with **Docker** and **virsh/KVM**, and wrote shell scripts for system automation

Research Assistant, IT Infrastructure

06/2020 – 12/2020

Computational Chemistry Lab, NTU | Linux, PBS, ZFS, Bash, ufw

Taipei, Taiwan

- Administered **8-node** Linux HPC cluster, 1 head and 7 compute nodes running PBS scheduler, supporting **10** researchers; managed user accounts, SSH keys, and filesystem permissions
- Maintained automated weekly ZFS snapshot backups, verified recoverability on demand, and ran SQL user management and backup tasks for lab databases
- Provided tier-1 and tier-2 support for cluster jobs, software installs, and account issues; operated ufw firewall and wrote Bash automation for routine maintenance

SOFTWARE ENGINEERING EXPERIENCE

Software Engineer Intern

05/2025 – 11/2025

ByteDance (TikTok) | Go, Python, SQL, Redis, Docker

San Jose, CA

- Shipped on-call diagnostic bot in Go serving **200+** internal users, cutting average ticket resolution time **50%**, from 7 days to 3.5 days, by auto-aggregating relevant past incidents at ticket creation
- Built **6+** Go services invoked as tools by the diagnostic agent: permission checks, access verification, log search, and bug filing, turning a chat interface into a programmatic action layer for non-technical staff
- Enabled self-service for **30+** weekly ad-platform issues via RAG-backed knowledge base, automating **50%** of common incidents and eliminating dependency on on-call engineers for routine tickets

Software Engineer Intern

11/2024 – 01/2025

ReMo | Go, FastAPI, Docker, AWS ECS, API Gateway

Portland, ME

- Containerized backend services with Docker and deployed to AWS ECS behind API Gateway, achieving high availability with health-checked rolling updates
- Built Go and FastAPI services achieving sub-3-second end-to-end latency for a multi-stage OCR and metadata extraction pipeline

Industrial Collaboration, Formosa Plastics x NTU CC Lab

01/2021 – 06/2021

Process simulation tooling for new US production plant | Python, Flask, React, Aspen Plus, Cantera

Taipei, Taiwan

- Built and deployed an internal web tool for Formosa engineers designing a new US production plant, with React frontend and Python Flask backend wrapping the **Cantera** kinetic simulator, accelerating PFR scenario evaluation **3×** over Aspen Plus
- Trained an AutoML-tuned neural network as a residual correction on Aspen Plus simulations using **80K** real-plant measurements, raising EDC cracker outlet prediction agreement from **80%** to **95%**, and scaled the correction across Formosa's full **18-reactor** production cascade

TECHNICAL SKILLS

Cloud & Infrastructure: Microsoft Azure, AZ-900 in progress, AWS, GCP, App Service, Application Insights

Systems & Virtualization: Linux, HPC with PBS, Windows Server learning, Docker, virsh/KVM

Networking: TCP/IP, DNS, NFS, LDAP, VPN, ufw, pfSense, Cisco switching

Scripting & Automation: Bash, Python, PowerShell learning, Go

Databases: SQL Server user management and backup, MySQL, PostgreSQL, Redis, Cosmos DB

Operations: Backup and recovery, tier-1 and tier-2 support, monitoring, on-call response
