EDUCATION

Northeastern University

Boston, MA

Master of Science in Computer Science, Minor in Digital Media

09/2024 – 04/2026

- Coursework: Large Language Models, Computer Vision, Cloud Computing, Object-Oriented Design

National Taiwan University

Taipei, Taiwan

B.S., Double Major in Computer Science and Chemical Engineering

09/2016 – 05/2022

- Coursework: Machine Learning, Computer Graphics, Cognitive Science, Human-Computer Interaction

EXPERIENCE

Software Engineer Intern

05/2025 – 11/2025

ByteDance (TikTok) | Python, Go, LLM Agents, RAG, Multi-Agent, Prompting

San Jose, CA

- Shipped an AI-powered diagnostic agent serving **200+** users, reducing resolution time **50%** by architecting prompt stacks that route incoming tickets and retrieve relevant past incidents at ticket creation
- Designed the agent's tool-calling layer: **6+** tools the LLM invokes for permission checks, access verification, log lookup, and bug filing, with structured outputs surfaced to non-technical users
- Encoded internal runbooks into multi-agent diagnostic workflows, shaping agent logic to resolve incidents that previously escalated to **10+** specialists
- Debugged suboptimal agent behavior by tracing execution logs, then iteratively refined prompts and context-window management to align outputs with intended troubleshooting flows

Software Engineer Intern

11/2024 – 01/2025

ReMo | Python, Go, FastAPI, YOLOv11, Docker, AWS ECS

Portland, ME

- Delivered ReMo's fundraising MVP: a **90%** accurate book spine recognition pipeline combining YOLOv11 detection, Internvl recognition, and custom LLM-based metadata extraction
- Built Go and FastAPI backend achieving **sub-3s** end-to-end latency; containerized and deployed services via Docker and AWS ECS for high availability

Research Assistant, Reinforcement Learning

07/2020 – 12/2021

Computational Chemistry Lab, NTU | Python, PyTorch, RL, Self-Attention, Behavior Cloning

Taipei, Taiwan

- Built an OpenAI Gym MDP environment for force-field geometry optimization, iterating **20+** versions of the reward and state design, then benchmarked **PPO** and **SAC** on an extension to reaction-path search
- Implemented a multi-head self-attention policy network with residual layer-normalization, trained via behavior cloning over BFGS expert demonstrations with a custom loss, designed to act permutation-invariantly across varying input sizes

PROJECTS

Pebble | AI Psychologist startup · Python, DeepSeek, LLM agent, safety, evals

2026

- Architected a CBT mental-health agent with a DeepSeek backend on a skill-as-node design after Rollwage et al. 2026 in *Nature Medicine*; every node carries a written SPEC contract, implementation, and automated evaluator
- Engineered a multi-layer safety stack with high-recall risk detection, jailbreak detection, an unbyypassable hard-coded crisis protocol, and an output guard that regenerates on violation and fails closed to a fixed refusal
- Composed prompt stacks from CBT stage logic, safety injections, and deterministic intervention selection over multi-turn sessions with persistent memory, verified with **95** automated tests and per-decision JSONL audit logging

PUBLICATIONS

B.-C. Ke, **M.-H. Li**, et al. *TurnAhead: Designing 3-DoF Rotational Haptic Cues to Improve First-person Viewing (FPV) Experiences*. **CHI 2023, Honorable Mention Award**. Designed and iteratively refined a multimodal VR interaction system in Unity / Meta Quest 2 / Arduino, using qualitative judgment to tune the experience and validating it through 4 controlled user studies with 30+ participants. doi:10.1145/3544548.3581443

TECHNICAL SKILLS

AI & Agents: LLM agents, prompt engineering, RAG, multi-agent workflows, tool-calling, context-window management, evals, PyTorch, RL (PPO, SAC), scikit-learn

Languages: Python, Go, JavaScript, TypeScript, C++, SQL

Tooling: Git/GitHub, Cursor, GitHub Copilot, Docker, AWS, Azure, Redis, PostgreSQL

Strengths: Tracing agent behavior through logs, iterative prompt refinement, precise written communication
